

# Tactics, Techniques & Procedures

**Captain Ron Peterman, US Navy  
Commander,  
Surface Warfare Development Group**

# Surface Warfare Development Group

...is the surface force agent for tactical  
development and evaluation

The “group” is the fleet

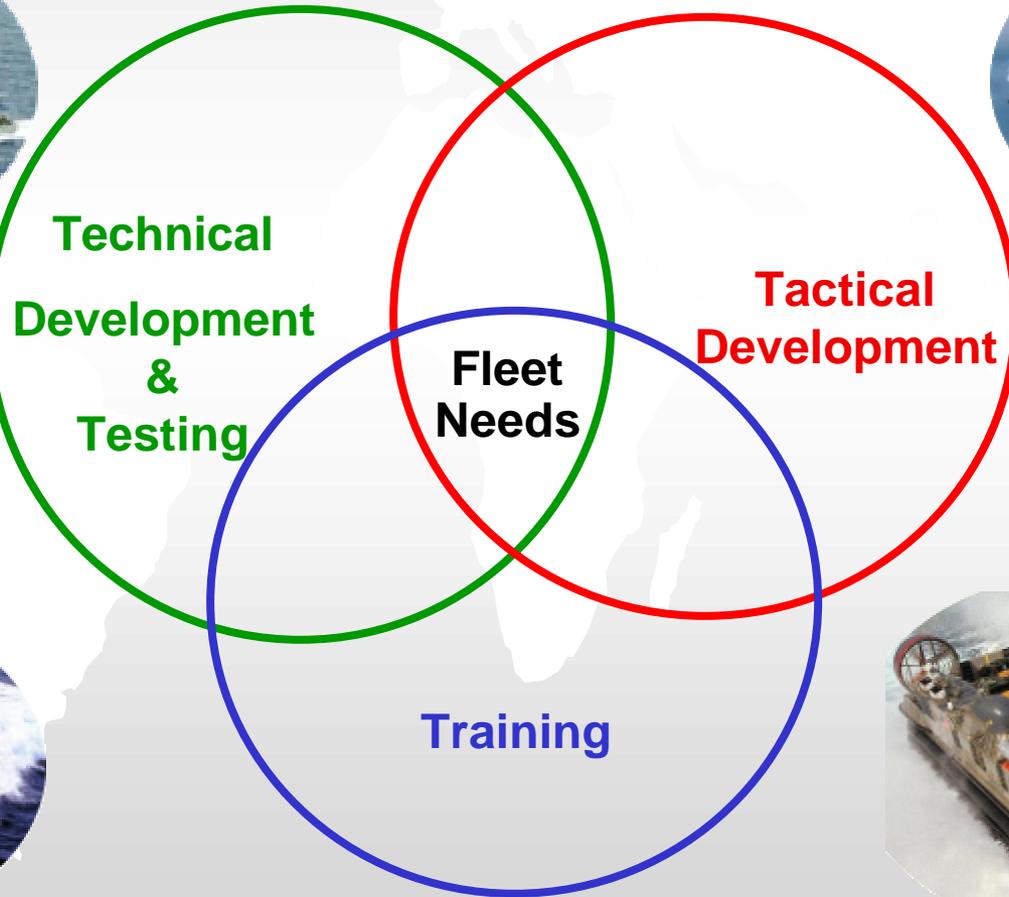

The fleet is the customer

# SWDG Mission

- Provide the Fleet with tactics, techniques and procedures to support the U.S. warfighting capability
  - If we went to war tomorrow, how would we employ our ships?
    - Not in 2010 or 2015
    - Not with the Starship Enterprise's technology and capabilities
    - Not geo-relocating the Arabian Gulf to Southern California
    - Not using unrealistic simulations of the actual threat
  - But against today's potential threats in regions of national interest
  - In the environment that we would have to fight in under the climatic conditions we would expect

## Multiple Defended Assets

Frequently, there may be a pier, two or more ships at anchor, vessel escort, and perhaps other HVAs which require defense. These multiple-asset scenarios require a harbor-wide FP posture rather than a point defense approach. In this environment, the following elements are required:

- Integration of fields of fire among ships, piers, and any landward security elements such as gate sentries to provide necessary coverage while minimizing the possibility of fratricide
- Deployment of sufficient sensor capabilities to cover radar and visual blind spots
- Continuous tracking of contacts throughout the harbor area so that all activities of suspicious vessels or craft are monitored and reported
- Larger boat patrol areas to ensure that coverage overlaps between nearby defended assets to inhibit hostile activity and interdict hostile craft as far as possible from the HVAs

One possible example of multiple defended assets and the waterborne FP assets assigned is shown in the Multiple Defended Assets figure.

### [Multiple Defended Assets figure](#)

*In this case, 10 security boats may be required to provide FP, depending on the level and types of threat. Commanders may have to prioritize the allocation of scarce assets to provide the best possible defense.*

[Appendix E](#) provides a worksheet for assessing the risks to various HVAs to aid in allocation of defensive resources. Some options for protecting HVAs when boat assets are limited include:

- Placing surveillance and point defense teams onboard ships, either at anchor or during transit, using a pilot boat

# Unified Warrior

## Missile Exercise Results

- 25 Missiles shot at 20 targets
- Highlights
  - Stream Raid tactics validated
  - 6 SM2 successful intercepts
  - 1 successful NATO Seasparrow RIM-7P++ warhead kill against Exocet
  - ENTERPRISE Battle Group completed all missile quals
- Lowlights
  - 7 NATO Seasparrow RIM-7P++ shots without data
  - Improper procedures prolonged engagements
  - No Standard Missile SM2 BLK IIIB /SM1 BLK VI performance evaluation
  - 2 serious equipment problems discovered
  - 2 unallocated missiles fired

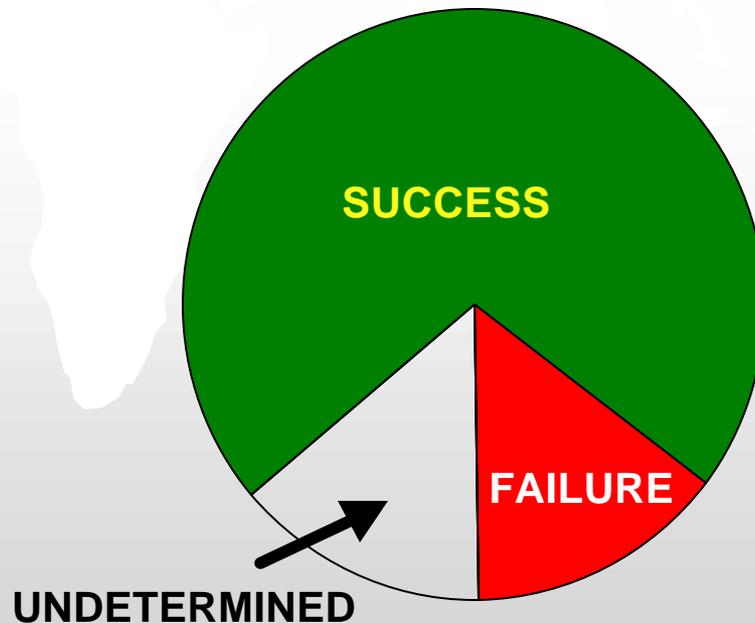

# Unified Warrior Results

## USN Only -- "Real Targets" versus BQMs

**EXOCET/KORMORAN  
MISSION RATIO**

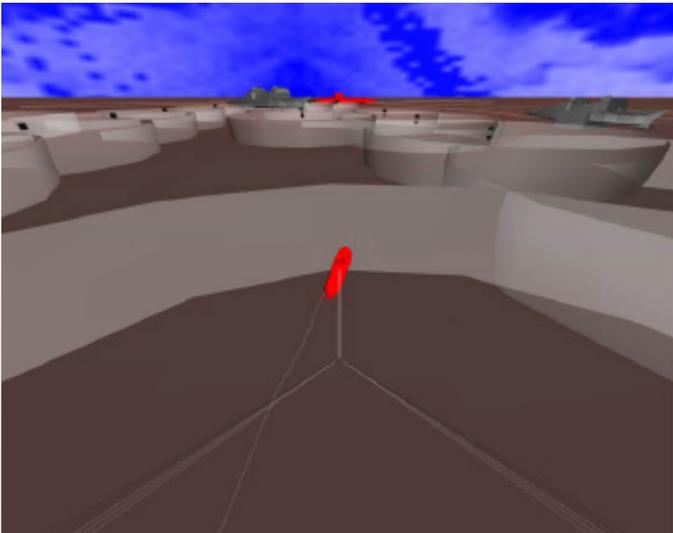

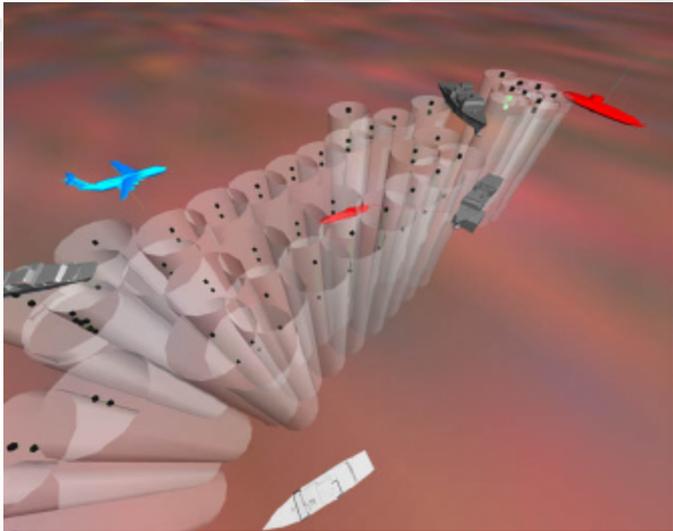

**BQM  
MISSION RATIO**

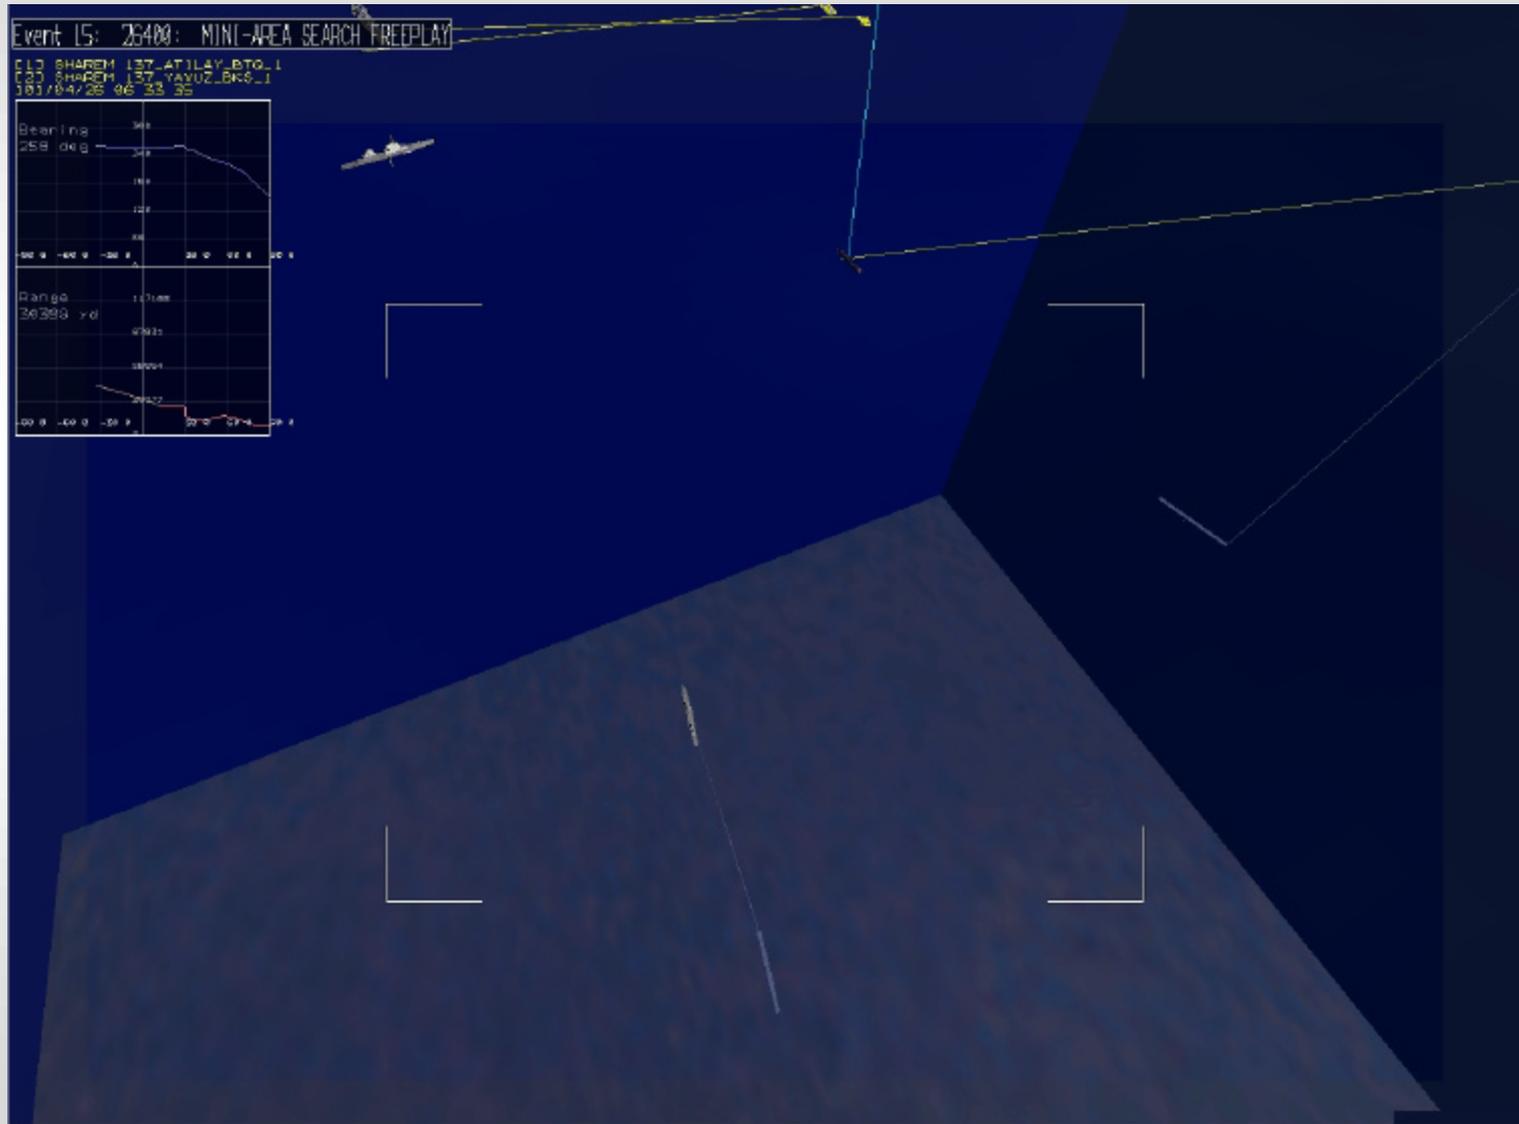

# Multi-dimensional User-oriented Synthetic Environment (MUSE) Application

- **Rational:**
  - Enhanced cueing methodology for the analyst.
  - Accomplish additional analysis requirements.
  - Provides alternative method of data presentation.
- **MUSE:**
  - Developed by Sandia Laboratory for nuclear weapons industry.
  - Provides multi-dimensional display of exercise data with an emersive environment.
  - Allows collaborative analysis.
